RENU 28 REDOX REVITALIZING GEL

Dermatest performed a 12-week clinical-dermatological study to verify visible improvement of cellulite. They measured length and breadth of adipose lobules (fat).

RESULTS

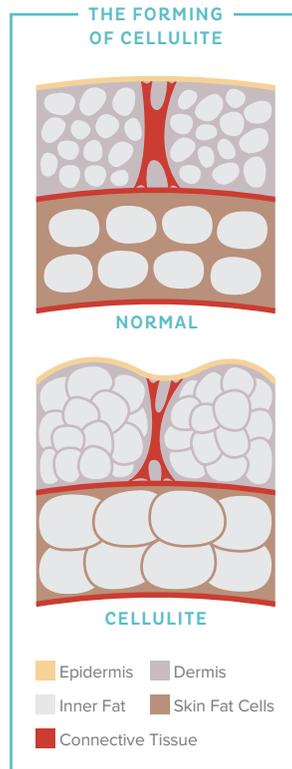

- > Length of adipose (fat) lobules decreased 15.8%
- > Breadth of adipose lobules decreased by 14.7%

This study shows an actual decrease in the size of fat lobules. Other cellulite treatments use inflammation and fillers for a temporary effect.

Dermatest conducted an additional 12-week elasticity study on human thigh skin.

RESULTS

- > High skin elasticity improved an average of 20.9%, with some results up to 24%.
